TRIPLE DISC

RAPTOR 2500 TT

HYDRAULIC SYSTEM

All versions of the pruners are equipped with an independent hydraulic system, consisting of a standard radiator coupled to the tank and an easy-to-maintain oil reservoir - with a capacity of 200 liters -, which improve the useful life of the components and oil and enable long-lasting operations.

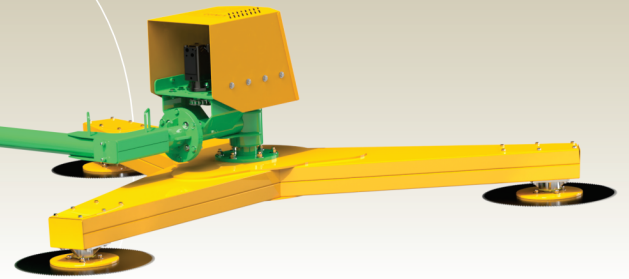

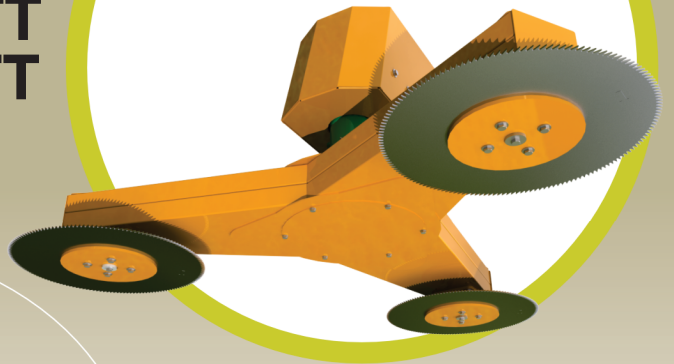

TOP PRUNING

SIDE PRUNING

RAPTOR 3000 TT 3500 TT

TRIPLE DISC

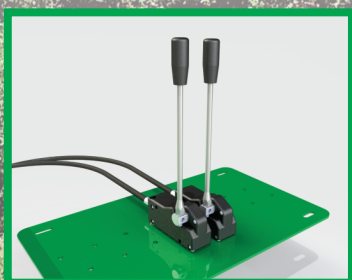

RAPTOR 2500 / 3000 / 3500

Perfect for top and side pruning of coffee trees, shrubs and others. Versions with two or three discs. Simple and quick rear coupling to the tractor's hydraulic system. Equipped with oil tank and hydraulically driven cutting unit.

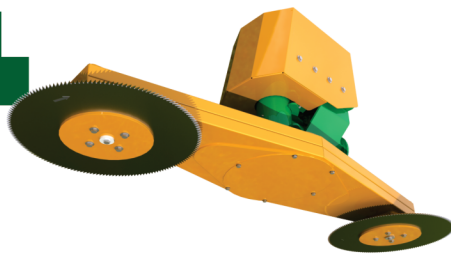

REMOTE CONTROL

The remote hydraulic control allows the operator to control the cutting unit directly from the tractor cabin, providing greater safety and ease of operation.

OPTIONAL ITEM WITH TWO DISCS

CUTTING UNIT

Also available in a version with two saw blades with a diameter of 650 mm.

OPTIONAL ITEM WITH PROTECTIVE GRILLE

The Protective Grid prevents pruning material from coming into direct contact with the tractor and compromising operation. The accessory is incorporated into the implement, which makes it possible to change from one tractor to another without having to remove the grid.

PRUNING VERSION WITH SUPPORT WHEELS

All versions of **Raptors TT Pruners** have optional support wheels and protective grid: models **2500 TT, 3000 TT, 3500 TT**.

Implement designed for exclusive use with tractor with cab. Use prohibited on tractor without cab.
